NEBRASKA WEEKLY WEATHER AND CROP REPORT

Release 11/22/65

Week Ending 11/22/65

WEATHER It was another warm, dry week with temperatures averaging from 4 degrees above normal in the east to 9 degrees above normal in the west. Widely scattered light showers Wednesday and again in the east Saturday with amounts ranging from a trace to a tenth of an inch.

CROPS Harvest of the 1965 row crops is nearing completion. At the close of the week about 15 percent of the corn remained in the fields and most of this was in the southwest and Panhandle area of the State. Elsewhere, there were widely scattered fields to be harvested. Most of the sorghum and soybeans are now under cover.

Fall plowing made good progress and there was considerable activity of stalk cutting and disking fields. Winter wheat continued to make excellent plant development and will enter the dormant stage in good condition. Leaf rust on plants is being reported in some areas of the State.

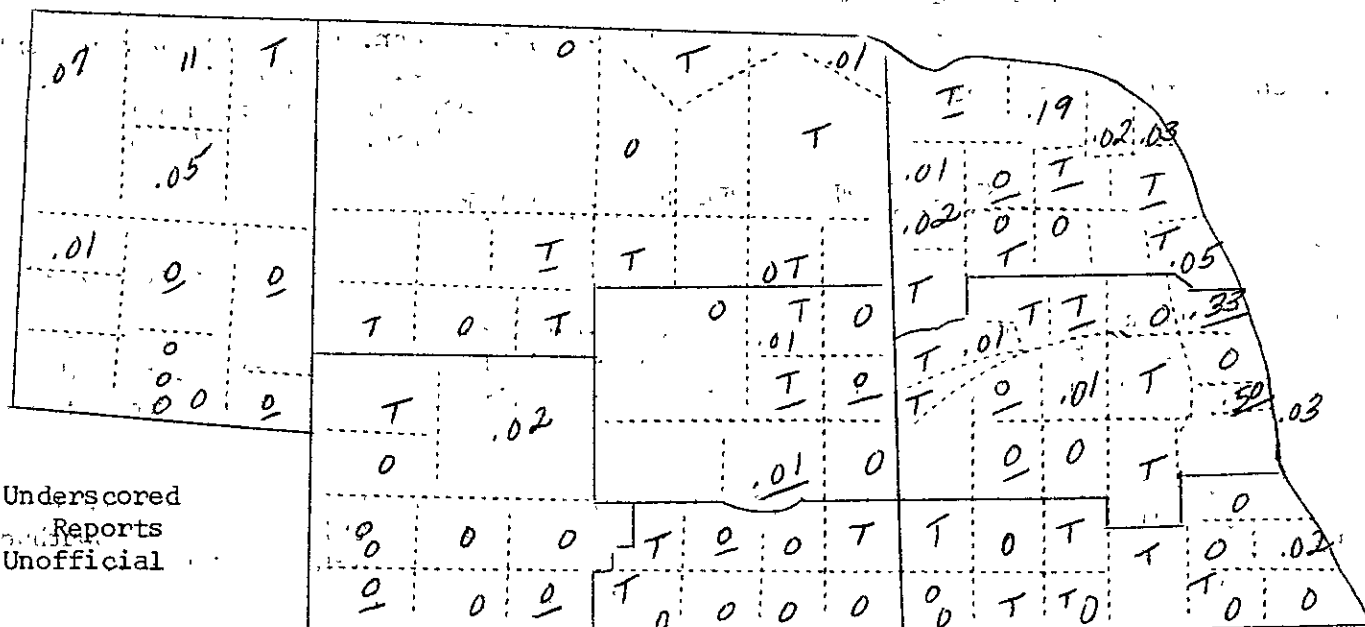

Pasture and range feed continue in good supply with more than the usual amount of forage feed available from harvested fields of corn and sorghum. Ranchers continue to move stacks of hay from fields to feed yards.

LIVESTOCK All livestock continue in good condition. Movement of stocker and feeder cattle is active with many farmers placing feeder cattle in stalk fields to glean fallen grain. Feed lots are filling at a rather rapid rate and gains of feed lot cattle have been good. Losses of all livestock have been light so far this fall. Inshipments of stocker and feeder cattle into the State totaled 214,000 head for October, a six percent increase over the same month a year ago. Lamb arrivals for October totaled 128,000 head compared to 126,000 a year ago.

WEATHER BUREAU TELEGRAPHIC REPORT OF PRECIPITATION FOR WEEK ENDING NOVEMBER 21, 1965
